

FIXED-SCOPE TECHNICAL ASSESSMENT

Turn an AI-Built App into a Production-Ready Product

A 72-business-hour architecture and risk audit for founders who have a working product but do not yet trust it under real users, real data or real failures.

ILS 4,900

Fixed price

72 business hours

After access is complete

Risk-ranked plan

No open-ended rewrite

The problem

Rapid AI-assisted development can produce a convincing demo while leaving the failure modes invisible. The risk usually appears later: unauthorized access, duplicate side effects, fragile integrations, missing backups, unsafe model actions, unbounded cost, blind deployments and no usable incident trail.

What the audit covers

Architecture and data Boundaries, database integrity, tenancy, concurrency, queues and high-risk state transitions.	Security and permissions Authentication, authorization, secret handling, sensitive data and external access.
AI and automation controls Prompt/tool safety, approval gates, output validation, cost limits, latency and fallback behavior.	Operations and reliability Deployment, rollback, observability, alerts, backups, restore, load and dependency failure.

What you receive

- Executive risk summary with the five issues most likely to hurt customers, revenue or trust.
- Evidence-based scorecard across security, data, AI controls, reliability and operations.
- Prioritized findings with severity, failure scenario, recommended fix and verification test.
- 30-day remediation plan, quick wins, and a recorded 60-minute review session.

Why Ilan / Asimtop

Distributed-systems architect and backend/AI engineer. Led national-scale modernization and platform engineering used by 600+ developers, with integrations serving 100+ external entities. Experience spans .NET, Node/Nest, Python, cloud, Kubernetes, event-driven systems and AI automation.

START WITH A FIT CALL

ilan.melki@gmail.com

Best fit: a functioning application built rapidly with AI-assisted tools, now approaching customers, payments, sensitive data, a handoff, investment diligence or meaningful scale. Not a penetration test or legal/compliance certification.
